## ► Definitions / explanations

# Additional Social welfare that could be gained with no network constraints (*Definition/explanation*)

- ▶ The figure shows the additional social welfare that could be gained with no network constraints inside CWE (borders D-NL, NL-B, B-F, D-F) .
- ▶ This key figure is calculated by hourly simulating/ coupling the CWE-region with  $ATC = \infty$  at the borders D-NL, NL-B, B-F, D-F and comparing to real MC-results:
  - Producer surplus= Producer surplus ( $ATC = \infty$ )- Producer surplus(real ATC)
  - Consumer surplus=Consumer surplus ( $ATC = \infty$ )- Consumer surplus(real ATC)
  - Congestion rent= Congestion rent ( $ATC = \infty$ )- congestion rent(real ATC)
- ▶ NB: The simulations are made with ITVC flows remaining identical.

# Additional Social welfare that could be gained with no network constraints (*Definition/explanation*)

- ▶ The purpose of the welfare reporting is the demonstration of the benefits of CWE ATC Market Coupling and future CWE FB MC.
- ▶ The monthly publishing of this figure was commonly agreed between the CWE Regulators and the CWE Project. It is one part of the welfare reporting.

- ▶ Examples: *“In single hours the producer/consumer gain can be positive or negative”*
